Thermal Heat Treatment Preparation Sheet

Be ready to leave your residence at the posted time. All residents & pets will need to be gone for the duration of the treatment. Clean up entire residence as if you were expecting company. **DO NOT** remove infested materials (mattresses/furniture) from the home. It is important that you leave all items in place to reduce risk of spreading the infestation to other rooms, hallways, or adjoining residences. **DO NOT** use or apply any type of over-the-counter products or pesticides, anywhere inside the residence.

You MUST place the following items in containers/boxes and leave them by the front door for the technician to inspect. These items will be removed from the residence during the treatment and returned to your residence post treatment:

All clothing in drawers and closets may be left in place. **DO NOT** place clothing into trash bags.

Compressed gases, flammable/combustible chemicals, and all aerosols and pressurized cans (oxygen tanks, propane, butane, cigarette lighters, hairspray, spray-on deodorants, bug sprays, spray paints, asthma inhalers, aerosol cleaning products, guns & ammunition)

Medicines and melt-able food items (chocolates, candy, etc.) may be placed in refrigerator Candles, crayons, wax figurines, oil paintings, arts and crafts items or any other similar items Musical instruments that could be damaged by heat, such as guitars.

Fruits, vegetables, carbonated beverages, and alcohol and wine bottles must be removed from home or placed in the refrigerator

vinyl records, or tapes must be removed to avoid warping

Plastic mini blinds must be taken down, pulled tight and left on the floor (vertical blinds may be left alone)

Remove all Live Plants

Any pictures held by command strips **MUST** be removed from the wall

Excess piles of papers or magazines must be removed or disposed of

All electronics must be unplugged (plasma tv's must be removed), **Except Oven, Refrigerator, and Freezers** Air conditioners and heat must be turned off

****The More Clutter, The Longer The Treatment Will Take****

Company has permission to access closets, furniture contents, as well as personal possessions during inspection and treatment

For a Successful bed bug treatment, please follow these preparation guidelines. Failure to comply with the preparation list by resident will result in a forfeit of your 10% deposit., Skyway Pest Management cannot be held liable for any damages that may occur.

The Customer Acknowledges the following:

- I understand that bed bugs are now a pandemic throughout the United States and the World. Bed bugs can be unknowingly introduced into an environment, including homes, apartments or hotel rooms, by human occupants or visitors' due to the ability of these parasitic insects to travel by attaching themselves to luggage, clothing, pets, furniture and personal items. Once introduced into a new environment, bed bugs can rapidly multiply, leading to an infestation. These insects are nocturnal and feed on human occupants at night. Bed bugs prefer to nest during the day in box springs, mattresses, closets, bedding, drapery, and other items usually found within close proximity to beds. **Initial here _____.**
- Company may request recommendations to be performed such as removing clutter, discarding items, making certain areas accessible, and etc. failure to follow these recommendations may result in delaying or preventing control of the infestation as well as possibly result in additional fees. **Initial here _____.**
- Company has permission to remove the dust cover(s) from the box springs and/or upholstered furnishings. **Initial Here _____.**
- Customer and any occupants have received the preparation sheet. **Initial here _____.**
- Customer hereby acknowledges and understands that the company makes no warranties or guarantees, express or implied, against bed bug bites or re-infestations that occur after the final inspection by the company following heat treatment if performed. **Initial here _____.**
- Customer hereby acknowledges and understands that a bed bug heat treatment provided by the company does not feature an ongoing or residual effect that will prevent future bed bug infestation. **Initial here _____.**
- Customer hereby acknowledges and understands that even after a complete and successful bed bug heat treatment, a new infestation can occur in the same area due to the ability and nature of bed bugs to spread and migrate by attaching themselves to humans, luggage, pets, and other items that can be transported into the treated area following the conclusion the Company's bed bug heat treatment. **Initial here _____.**

ENVIRONMENTALLY FRIENDLY AND CHEMICAL FREE BED BUGS DEVELOP RESISTANCE TO WIDELY USED CHEMICAL TREATMENTS, RENDERING THEM INEFFECTIVE

HEAT ASSAULT & HOW IT WORKS

Heat Assault is the most powerful bed bug heating equipment on the market. Our 500X unit is capable of reaching temperatures of 145°F or higher, resulting in total death of all bed bugs and bed bug eggs in a matter of hours. You won't have to do the job twice with this type of power.

Heat Assault uses forced convection technology which creates a powerful, consistent and uniform output of heat. This industry leading power and capacity allows you to treat entire floors or multiple units at one time.

Bed bugs and bed bug eggs are killed once air temperatures reach the "kill zone" of 125°F (52°C). Heat Assault produces temperatures of 145°F or higher using forced convection technology. This means that "kill zone" heat is produced quickly and uniformly pumped through the treatment area ensuring the death of ALL bed bugs and bed bug eggs in a matter of seconds. Heat Assault's peak temperature ensures that the hard to reach areas such as wall voids and areas insulated by clothing or carpeting are able to be treated effectively.
